

Become a partner of

Partnership opportunities

As a study association for enthusiastic MSc. students, we have multiple ways to shape a partnership.

Potential ways of collaboration

- Organising a business course or company visit
- Sponsor career activities
- Hosting a missing maps event
- Share job opportunities through our media channels
- Any other ideas or personalized approaches are welcome!

Please contact us if you have interest in any partnership opportunities. Together we can shape a successful collaboration in which we both can reach our goals!

About

Founded in 2015, NODE is the student association linked to the master programme: Geographical Information Management and Applications, or GIMA in short. This master is divided among four Dutch universities - Delft University of Technology, University of Twente, Utrecht University & Wageningen University & Research - and attracts students with a variety of nationalities. This made the need of connection among students great. NODE is the direct result of this need. We try to bring GIMA students together, both inside and outside of the classroom. NODE organizes activities, relays career opportunities and organizes social gatherings during contactweeks of the study. We also organize study related activities through close communication with the student programme. We hope you found this informative and feel free to contact us at: gima-node@uu.nl.

For companies, there are different opportunities through which we can collaborate with each other. There are annual events such as the career day and company visits, as well as quarterly recurring events such as business courses. We are also always open to any collaboration ideas from the companies' sides!

The GIS Careerday

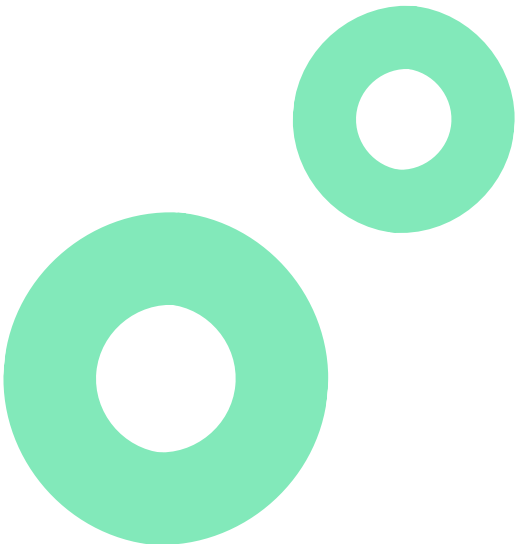

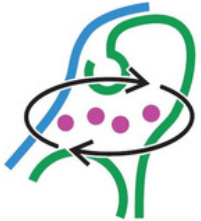

NODE organises a career event every year, a day to bring companies and organisations in contact with students with an interest in geo-information. The GIS Career Day turned out to be a success for several years now. It consists of a company fair, presentations from several GI-innovators and workshops. At the last few editions, more than 100 students have been present. The audience consists not only of students from GIMA, but also of students from other GIS courses in the Netherlands. The GIS Career Day offers the chance to get in contact with the current generation GI-students, including students searching for internship possibilities.

Partner possibilities for the GIS career day 2025
